

Ambulance Service Management System

A project submitted to

UKA TARSADIA UNIVERSITY

in partial fulfilment of the requirements
for the degree of

Master of Science in Information Technology

for 7th Semester

2025-26

Group Number: 15

Submitted By:

Ishita Patel– (202206100110022)

Bhavarth Vaidya – (202206100110068)

Harshil Patel – (2022061001100137)

Guided By:

Ms. Bhumika Patel

Assistant Professor

Babu Madhav Institute of Information Technology

Uka Tarsadia University

Bardoli – 394350

December 2025

CERTIFICATE

This is to certify that the project report entitled “**Ambulance Management System**” has been carried out by Ishita M. Patel(202206100110022), Bharath K. Vaidya (202206100110068) and Harshil M. Patel (202206100110137) under my guidance in partial fulfilment of the requirement for the **Master of Science in Information Technology** during the academic year 2025-26.

Date: 19-12-2025

Chapter 1: Introduction

- **Problem Definition**

The **Ambulance Service Management System (ASMS)** is a comprehensive **web-based emergency service platform** designed to digitally manage and streamline ambulance operations in a manner similar to modern ride-hailing applications. The system provides a **centralized environment** that connects **patients, ambulance drivers, and system administrators** on a single platform, ensuring efficient coordination, faster response times, and improved service reliability during medical emergencies. The primary objective of ASMS is to **simplify the ambulance booking process** while ensuring effective management of resources such as ambulances, drivers, hospitals, and service records. By replacing traditional phone-based or manual systems, ASMS minimizes delays, reduces operational errors, and improves communication among all stakeholders involved in emergency medical services.

- **Project Purpose**

The system provides a fast and reliable way for patients to call ambulance during an emergency, track them in real time, and help administrators and drivers manage services efficiently.

- **Project Scope**

The system provides quick and organized ambulance services only within Surat, enabling easy booking, live tracking, and efficient management of ambulances and drivers.

Chapter 2: Overall Description

2.1 Product Perspective/Environment Description

The Ambulance Management System is a web-based application developed to manage ambulance services efficiently. It provides a digital platform for patients, drivers, hospitals, and administrators to interact in real time. The system replaces manual processes with an automated solution for booking, tracking, and managing ambulances.

2.1.1 Hardware Interface/ Hardware Specification

Processor	Intel core i7
RAM	16 GB or Higher
HDD	1 TB

2.1.2 Software Interface/ Software Specification

Operating System	Microsoft Windows 11
Front-End	React.js, Tailwind CSS
Back-End	Node.js, Express.js
Tools	Visual Studio Code

Chapter 3: System Specific Requirements

3.1 Functional Requirements

Modula 1: User Management

Requirement No.	Description	Comment
FR1	The system shall allow Patients and Drivers to register a new account.	Registration
FR2	User can update their profile information.	Profile Update
FR3	The system shall allow all users to log in using username and password.	Login
FR4	The system shall recover forgotten passwords, and change existing passwords.	Password Recovery

Modula 2: Admin Management

Requirement No.	Description	Comment
FR1	The admin shall be able to view details of Ambulances, Drivers, and Patients with filter and search options.	Admin Dashboard
FR2	The admin shall be able to manage Driver availability and operational status.	Driver Management
FR3	The admin shall be able to add, update, and manage ambulance details and types.	Ambulance Management
FR4	The admin shall able to view records of services, drivers.	View Records

Modula 3: Patient Services

Requirement No.	Description	Comment
FR1	The Patient shall be able to book an ambulance and select the type of ambulance required.	Book Ambulance
FR2	The Patient shall be able to confirm a booking after viewing ETA, ambulance details, and estimated cost.	Booking Confirmation
FR3	The system shall automatically share the Patient's location with nearby Drivers during booking.	Location Sharing
FR4	The Patient shall be able to track the live location of the ambulance until it arrives.	Live Tracking
FR5	The Patient shall be able to provide feedback and rating after service completion	Feedback/Rating

Modula 4: Driver Services

Requirement No.	Description	Comment
FR1	The Driver shall be able to toggle their availability status (Available/Unavailable).	Driver Availability
FR2	The Driver shall be able to receive ambulance booking requests with service details.	Booking Requests
FR3	The Driver shall be able to update service status (Accepted, On-Service, Completed).	Service Status
FR4	The Driver shall be able to report vehicle breakdowns or issues directly to Admin.	Breakdown Report

Modula 5: System Features

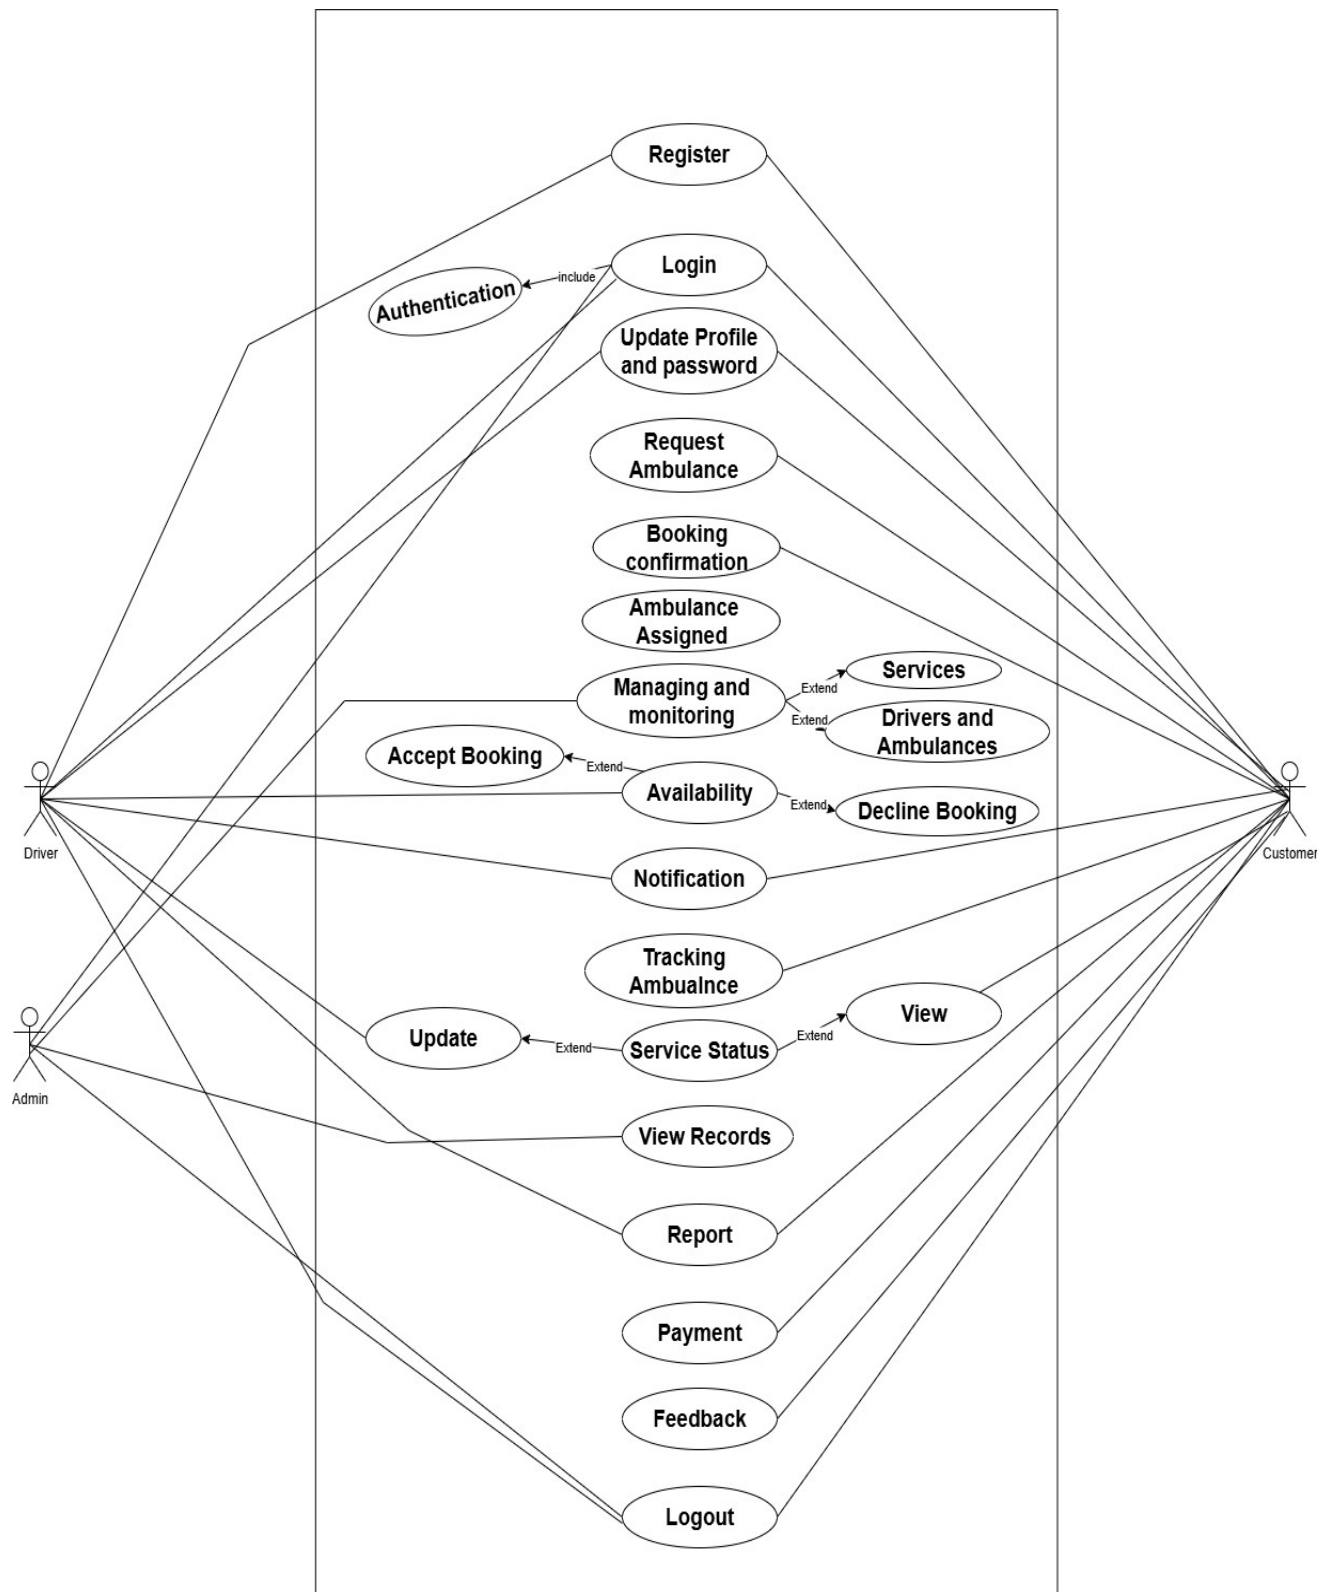

Requirement No.	Description	Comment
FR1	The system shall stop sharing the Patient's location once the service starts to ensure privacy.	Location Privacy
FR2	The system shall update the live location of the ambulance during active services	Live Location
FR3	The system shall store only essential service and contact details, ensuring no sensitive medical data is saved.	Data Privacy

3.2 Non- Functional Requirements

Requirement No.	Description	Comment
NFR1	The system shall maintain 99% system uptime.	Availability
NFR2	The system shall ensure encrypted data storage and role-based access control.	Security
NFR3	The system shall provide a simple and user-friendly interface.	Usability
NFR4	The system shall follow a modular design for easy maintenance and updates.	Maintainability
NFR5	The system shall store only essential data and stop location sharing after ride end.	Data Privacy

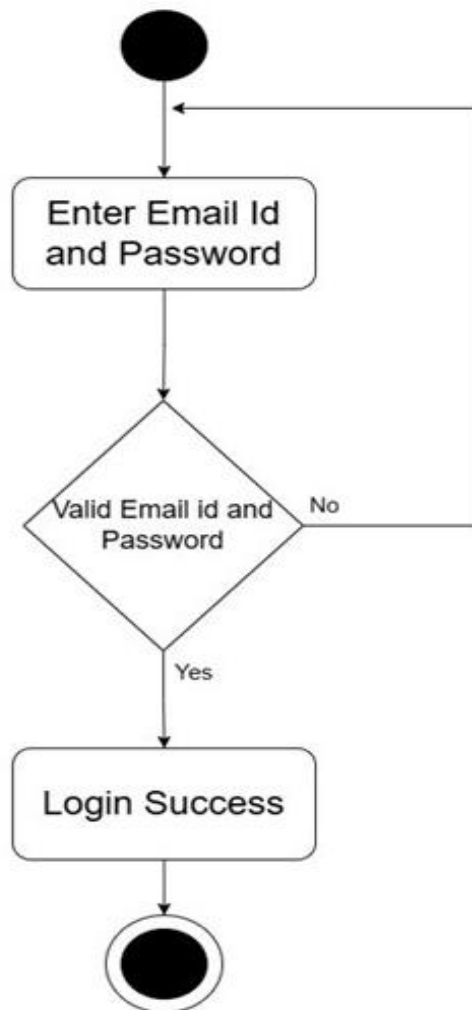

Chapter 4: System Analysis

Chapter 5: System Design

5.1 System Design (Describes the database structure.)

5.1.1 Data Dictionary

1) BOOKINGS TABLE

Field Name	Datatype	Size	Constraint	Description
id	ObjectId	—	Primary Key	Booking ID
bookingId	String	30	UNIQUE	Booking reference number
patientId	ObjectId	—	Foreign Key	Patient reference
driverId	ObjectId	—	Foreign Key	Driver reference
ambulanceType	String	30	NOT NULL	Type of ambulance
pickupLocation	Object	—	—	Pickup GPS location
pickupAddress	String	200	NOT NULL	Pickup address
dropLocation	Object	—	—	Drop GPS location
dropAddress	String	200	NOT NULL	Drop address
status	String	30	—	booked / dropped
distance	Number	—	—	Distance in km

amount	Number	—	—	Fare amount
paymentStatus	String	20	—	paid / unpaid
paymentMethod	String	20	—	cash / online
priority	String	20	—	normal / emergency
createdAt	Date	—	—	Booking date
updatedAt	Date	—	—	Last update

2) DRIVERDOCUMENTS TABLE

Field Name	Datatype	Size	Constraint	Description
_id	ObjectId	—	Primary Key	Document ID
driverId	ObjectId	—	Foreign Key	Reference to driver
type	String	30	NOT NULL	license / rc / photo
url	String	255	NOT NULL	Document file path
status	String	20	DEFAULT 'pending'	Approval status
uploadedAt	Date	—	—	Upload timestamp

3) DRIVERS TABLE

Field Name	Datatype	Size	Constraint	Description
_id	ObjectId	—	Primary Key	Unique driver ID
name	String	100	NOT NULL	Driver name
email	String	100	UNIQUE	Driver email
phone	String	15	UNIQUE	Driver phone
password	String	255	NOT NULL	Encrypted password
LicenseNumber	String	50	UNIQUE	Driving license number
vehicleNumber	String	20	UNIQUE	Ambulance vehicle number
ambulanceType	String	30	NOT NULL	ICU / Cardiac / Normal
status	String	20	DEFAULT 'offline'	Driver availability
rating	Number	—	DEFAULT 0	Driver rating
totalRides	Number	—	DEFAULT 0	Total rides completed
location	Object	—	—	Current GPS location
isApproved	Boolean	—	DEFAULT false	Admin approval

isEmailVerified	Boolean	—	DEFAULT false	Email verification
walletBalance	Number	—	DEFAULT 0	Driver wallet balance
documents	Array	—	—	Uploaded documents
totalRatings	Number	—	DEFAULT 0	Total ratings count
createdAt	Date	—	—	Created date
updatedAt	Date	—	—	Updated date

4) HOSPITALS TABLE

Field Name	Datatype	Size	Constraint	Description
_id	ObjectId	—	Primary Key	Hospital ID
name	String	150	NOT NULL	Hospital name
location	Object	—	—	GPS location
specialties	Array	—	—	Medical specialties
phone	String	15	—	Contact number
address	String	200	—	Hospital address
createdAt	Date	—	—	Created date
updatedAt	Date	—	—	Updated date

5) PATIENTS TABLE

Field Name	Datatype	Size	Constraint	Description
_id	ObjectId	—	Primary Key	Unique patient ID
name	String	100	NOT NULL	Patient full name
email	String	100	UNIQUE	Patient email
phone	String	15	NOT NULL	Patient mobile number
password	String	255	NOT NULL	Encrypted password
address	String	200	—	Patient address
role	String	20	DEFAULT 'patient'	User role
isVerified	Boolean	—	DEFAULT false	Email verification status
emergencyContacts	Array	—	—	Emergency contact list
isBlocked	Boolean	—	DEFAULT false	Emergency contact list
createdAt	Date	—	—	Account creation date
updatedAt	Date	—	—	Last update date

6) RATINGS TABLE

Field Name	Datatype	Size	Constraint	Description
_id	ObjectId	—	Primary Key	Rating ID
bookingId	ObjectId	—	Foreign Key	Booking reference
reviewerId	ObjectId	—	Foreign Key	Patient ID
driverId	ObjectId	—	Foreign Key	Driver ID
rating	Number	—	CHECK (1–5)	Star rating
comment	String	255	—	Review comment
driverReply	String	255	—	Driver response
createdAt	Date	—	—	Rating date
updatedAt	Date	—	—	Update date

7) SETTINGS TABLE

Field Name	Datatype	Size	Constraint	Description
_id	ObjectId	—	Primary Key	Settings ID
fareRates	Object	—	—	Fare calculation rules
commission	Object	—	—Key	Admin & driver commission
updatedBy	ObjectId	—	Foreign Key	Admin ID
updatedAt	Date	—	—	Last updated

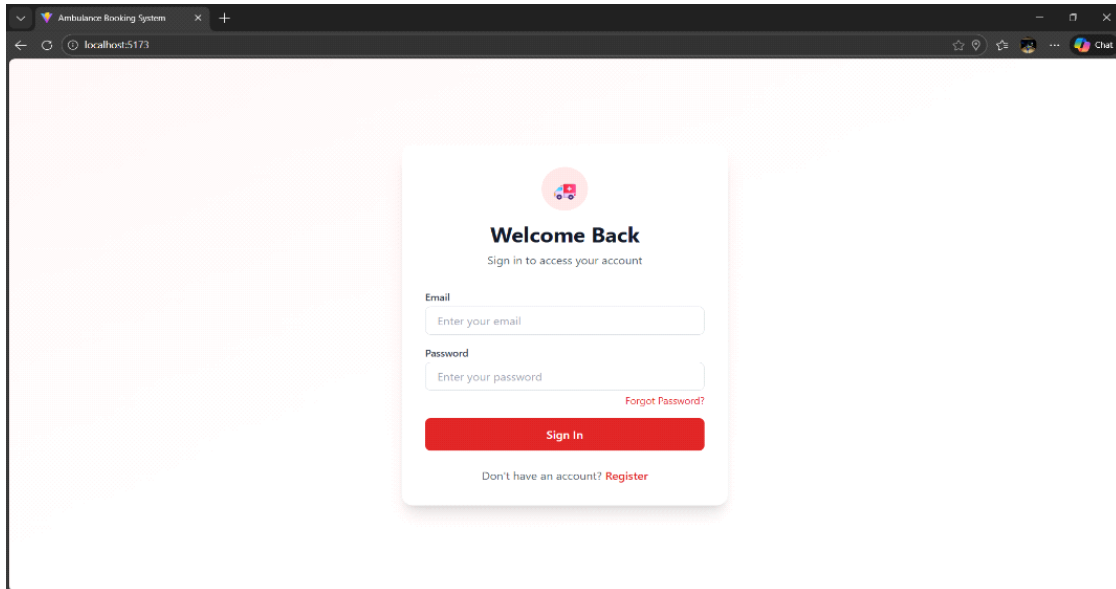

8) SOSALERTS TABLE

Field Name	Datatype	Size	Constraint	Description
_id	ObjectId	—	Primary Key	SOS alert ID
driverId	ObjectId	—	Foreign Key	Driver reference
driverName	String	100	—	Driver name
vehicleNumber	String	20	—	Vehicle number
message	String	100	—	SOS message
location	Object	—	—	Alert location
status	String	20	DEFAULT 'active'	Alert status
resolvedBy	ObjectId	—	Foreign Key	Admin ID
resolvedAt	Date	—	—	Resolution time
createdAt	Date	—	—	Created time
updatedAt	Date	—	—	Updated time

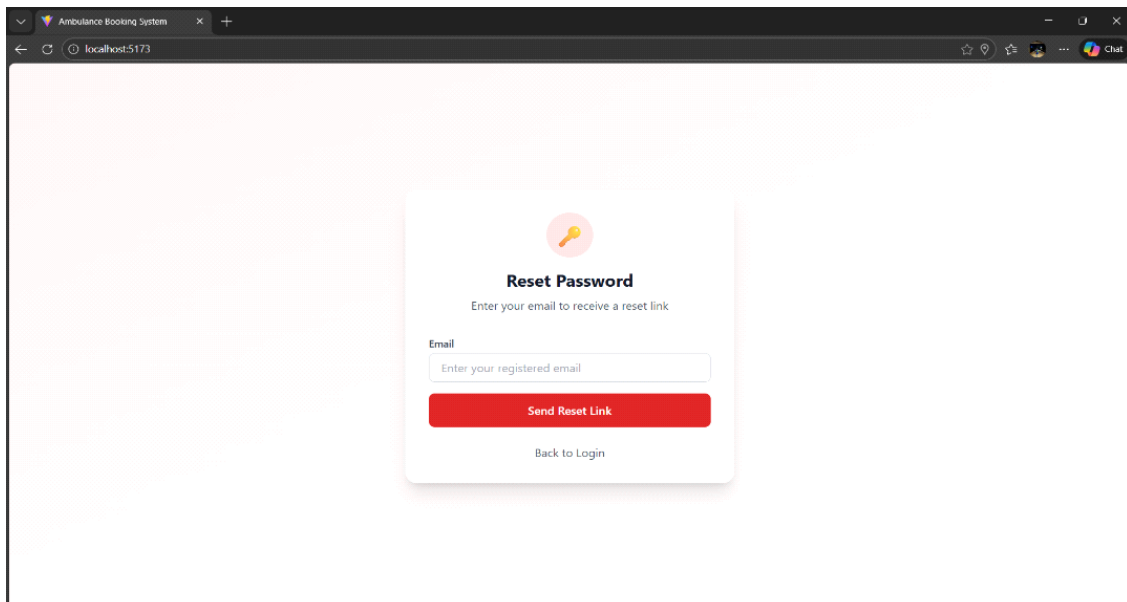

Chapter 6: System Implementation

6.1 Screenshots

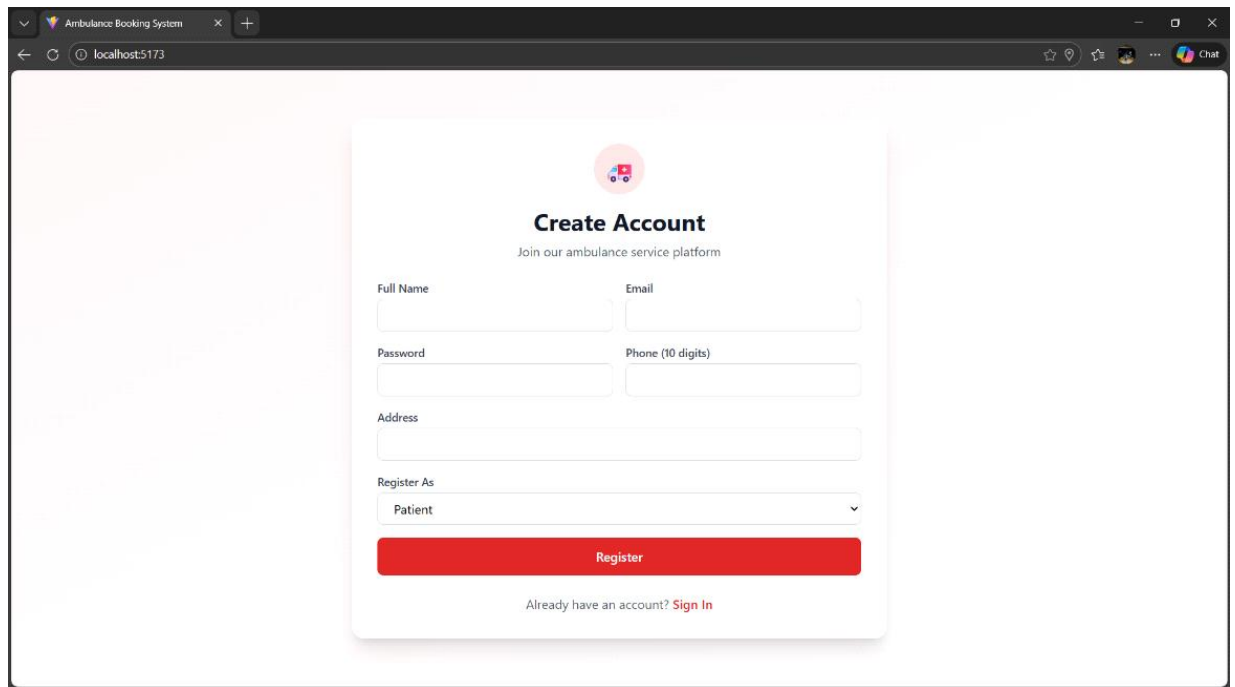

1) Login

2) Forget password

3) Registration

The screenshot shows a web browser window with the title 'Ambulance Booking System' and the address bar displaying 'localhost:5173'. The main content is a 'Create Account' form. At the top of the form is a circular profile picture placeholder with a red and white icon. Below this is the heading 'Create Account' and the subtext 'Join our ambulance service platform'. The form contains several input fields: 'Full Name', 'Email', 'Password', 'Phone (10 digits)', and 'Address'. Below these is a 'Register As' dropdown menu with 'Patient' selected. A prominent red 'Register' button is positioned below the dropdown. At the bottom of the form, there is a link that says 'Already have an account? Sign In'.

27) Block driver

The screenshot shows the Admin Panel interface. On the left is a sidebar with navigation options: Overview, Bookings, Pending Drivers, All Drivers (selected), Patients, Feedbacks, SOS Alerts, Settings, Live Map, Edit Profile, and Sign Out. The main content area has a search bar 'Search Driver Name...' and a dropdown 'All Types'. Below is a table titled 'All Drivers Status' with columns: NAME, EMAIL, VEHICLE, AMBULANCE TYPE, RATING, STATUS, and ACTIONS. The table lists five drivers: pathak kumar, Raju kumar, Chintu Kumar, Mehboob, and vishu. A modal titled 'Block Driver: Mehboob' is open, showing 'Reason for Blocking' as 'Bad Experience', 'Block Duration' as '7 Days', and buttons for 'Cancel' and 'Block User'.

28) Block patients

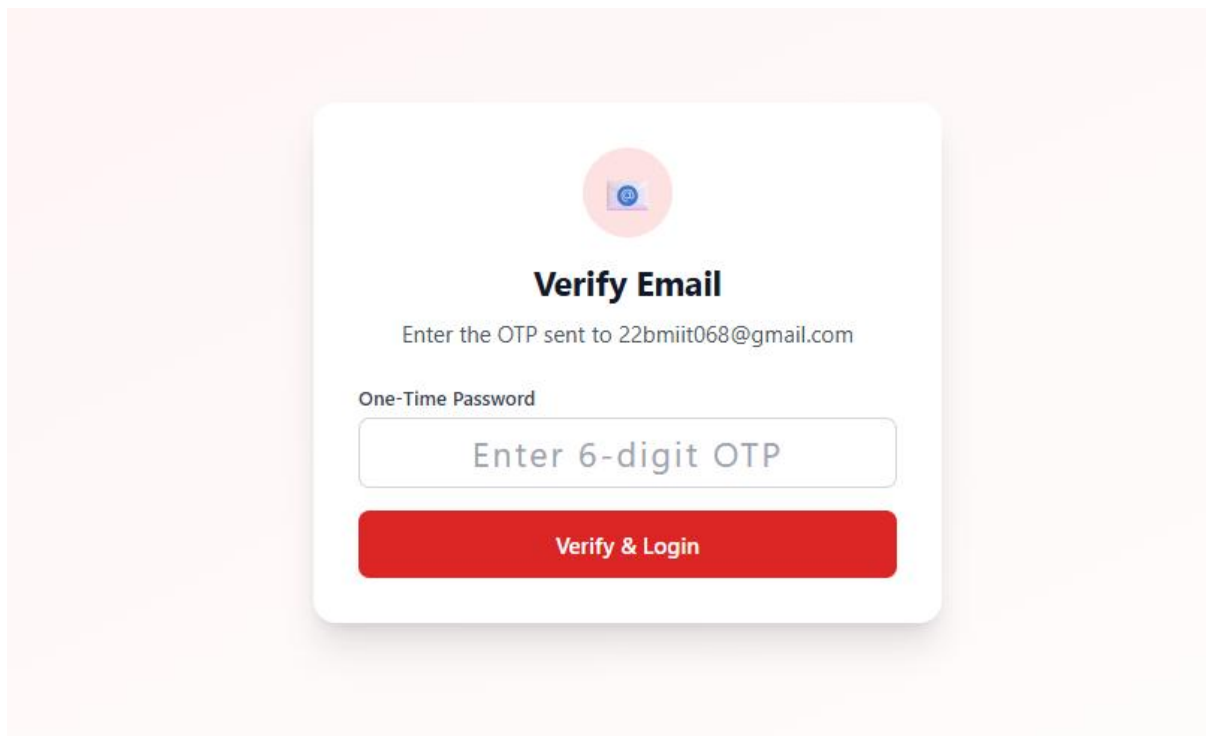

The screenshot shows the Admin Panel interface. On the left is a sidebar with navigation options: Overview, Bookings, Pending Drivers, All Drivers, Patients (selected), Feedbacks, SOS Alerts, Settings, Live Map, Edit Profile, and Sign Out. The main content area has a search bar 'Search Patient Name...' and a dropdown 'All Types'. Below is a table titled 'Registered Patients' with columns: NAME, EMAIL, PHONE, ADDRESS, JOINED DATE, STATUS, and ACTIONS. The table lists five patients: Harshil Patel, Ishita, Meet Patel, and Manav Patel. A modal titled 'Block Patient: Ishita' is open, showing 'Reason for Blocking' as 'Toxic Behaviour to driver', 'Block Duration' as 'Permanent', and buttons for 'Cancel' and 'Block User'.

NAME	EMAIL	PHONE	ADDRESS	JOINED DATE	STATUS	ACTIONS
Harshil Patel	22bmiit137@gmail.com	9512891286	Adajan, Surat, Gujarat	11/23/2025	Active	Block
Ishita	22bmiit022@gmail.com	9876543212	Surat, Gujarat	11/24/2025	Active	Block
Meet Patel	22bmiit021@gmail.com			11/24/2025	Active	Block
Manav Patel	clicksbyhp@gmail.com			11/27/2025	Active	Block

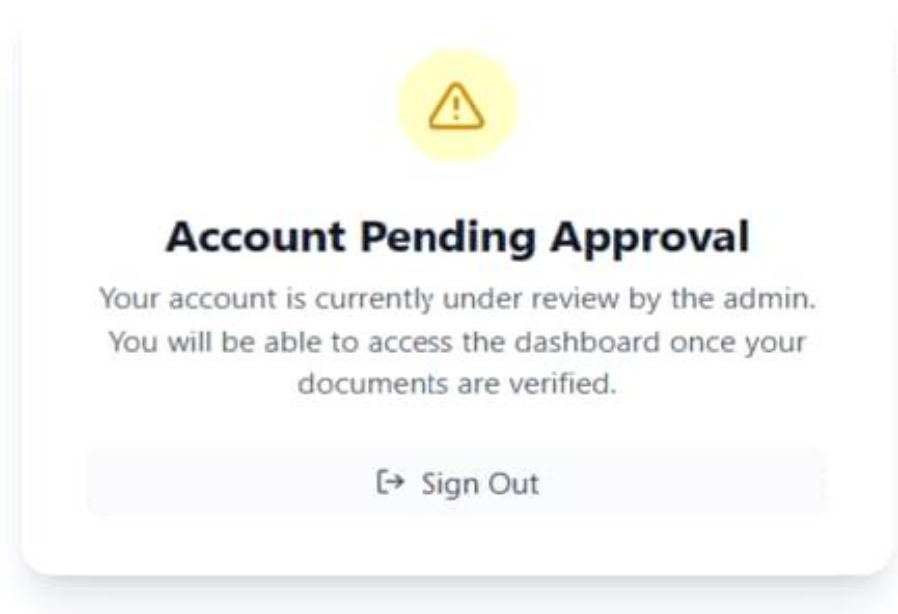

29) Admin edit profile

30) OTP verification

31) Account approve

Chapter 7: Testing

7.1 Test cases

(List the test cases, describing inputs, expected outputs, and actual outputs.)

Test Case ID	Test Case	Inputs	Expected Output	Actual Output	Status
TC1	Verify Login Functionality	Username: ambulance8800@gmail.com Password: Admin@12345	Admin is redirected to the dashboard	Admin is redirected to the dashboard	Pass
TC2	Verify Login Functionality	Username: 25bmiitmscit011@gmail.com Password: Driver@12345	Driver is redirected to the dashboard	Driver is redirected to the dashboard	Pass
TC3	Verify Login Functionality	Username: clicksbyhp@gmail.com Password: Patient@12345	Patient is redirected to the dashboard	Patient is redirected to the dashboard	Pass
TC4	Verify duplicate email registration.	Register with an already existing email.	Error message "Email already exists."	Error message "Email already exists."	Pass
TC5	Patient can book ambulance	Enter Pickup location or Allow Current Location, Enter Drop Location or Select near by hospital, select ambulance type	Success message "Booking Confirmed"	Success message "Booking Confirmed"	Pass
TC6	Verify mandatory fields validation	Pickup Location: empty, Drop Location: empty	Validation message is displayed	Validation message is displayed	Pass

TC7	Verify Booking is reflected in dashboard	Ambulance type: normal, Pickup Location: (21.1928, 72.8033) Drop Location: Hospital	Dashboard available request is updated	Dashboard available request is updated	Pass
TC8	Driver can accept the ride	Ambulance type: normal, Pickup Location: (21.1928, 72.8033) Drop Location: Hospital	ETA display on both patient and driver dashboard	ETA display on both patient and driver dashboard	Pass

TC10	Verify Revenue is reflected in admin and driver dashboard	Fare: 230/-	Dashboard total expense is updated	Dashboard total expense is updated	Pass

Chapter 8: Future Enhancement

Navigation Integration

Add "Get Directions" button in Active Rides to open Google Maps/Waze with patient location, Turn-by-turn navigation hints.

Availability Schedule

Set preferred working hours Auto-offline during break times "Take a Break" quick toggle (30min/1hr/2hr).

Document Expiry Alerts

Notification when License/RC/Insurance near expiry Re-upload expired documents.

Payment History

View all transactions download receipts/invoices payment method management.

Chapter 9: Conclusion

The Ambulance Management System provides a fast and efficient way to manage ambulance services digitally. It helps patients book ambulances easily and allows drivers to respond quickly during emergencies. The system maintains accurate records, improves response time, and reduces manual work. Overall, this project enhances emergency service management and ensures better healthcare support.
